MEMORANDUM FOR: Plans and Programs Staff, OL

SUBJECT

: Communications Requirements for FY 1976 and

Long-Range Secure-Voice Requirements

1. At the present time, we have adequate secure telephone service since generally speaking the personnel matters which we discuss are not classified. When we need a secure system, it is so infrequent that we find use of the system available to the Director of Logistics more than adequate. We would not find any great advantage in overseas telephone systems since all of our overseas employees are in operating components and communications to those employees would be through those components.

25X1

3. What is needed in the immediate future is a system to give the recipient of a call an immediate indication as to whether the call is coming from inside or outside. For example, could a switchboard system be so arranged to permit a light on the telephone to come on whenever a call is coming from outside?
